INSTRUCTION SHEET #388352

## **Breath Shields – End Users' Responsibility**

## **ATTENTION:**

EG10104 Revised 08/23

It is the End Users' responsibility to ensure proper materials and safe mounting of the Breath Shield is made at the installation site!

The Installer / End User are responsible to ensure the mounting location (ie; ceiling, roof joist, beam, overhang, etc.) is of adequate strength to hang the suspended Breath Shield or multiple Breath Shields, depending on the desired installation.

Weight calculation: Plexiglass width x height ÷ 144, multiplied by 1.52 lbs. per sq. ft.

Example: For a 30" x 60" Breath Shield...

 $30 \times 60 \div 144 = 12.5 \text{ sq. ft.}$ 

12.5 sq. ft. x 1.52 lbs per sq. ft. =  $\underline{19.00 \text{ lbs.}}$ , plus weight of chains.

Eagle Group will not be held liable for unsafe mounting practices and/or an inadequate structure from which the Breath Shield(s) are suspended.
